

Fire door Information

1 Hinges

Your door should have three or more hinges holding it in place. Check that hinges are fixed firmly and that there are no missing or broken screws.

2 Door and frame

There shouldn't be any damage to your door or to the frame.

3 Door closing

Your door should close firmly on its own, without catching on the floor or frame.

4 Gaps

When your door is closed, there should be a gap of no more than 4mm to the top and sides. You can use a £1 coin, which is about 3mm thick, to check.

5 Handle

The door handle should operate smoothly and should return to its original position when released.

If you need to report a repair to any fire door, including the door to your flat, call us straight away on **0330 303 2222**.
